TECHNICAL SPECIFICATIONS:

PRESSPAD :

The quality of a laundry or dry cleaning press depends mainly of the correct even contact of the garments to be pressed and the head of the press.

For optimal result springs are essential to guarantee permanent quality finish on the press. They will remain resilient in time.

Our PRESSPAD has 3024 individual springs per square meter, each spring is firmly fixed to the Aluminum base plate.

The base plate is perforated for correct airflow.

The aluminum base plate can be bent to the shape of the buck of the press.

PRESSPAD is made individually to the shape and size of the press.

The springs are made of galvanized spring wire or stainless steel spring wire.

The standard high of the springs is 11 mm or 16 mm, other heights on request.
